Graduation Project

Specialty: **SOFTWARE ENGINEERING**

CLMPilot: an integration-first Contract Lifecycle Management platform for the European Mittelstand, built on a CQRS and Event Sourcing framework

Presented by

Idris SADDI

INSAT Supervisor : **Mr. LAST First**
Company Supervisor : **Mr. LAST First**

Presented on: **–/06/2026**

JURY

Mr. President LAST (President)
Ms. Reviewer LAST (Reviewer)

Academic Year: 2025/2026

Acknowledgements

I would like to thank ...

7	Internationalisation strategy	9

Introduction

1 Hosting company: Gradient Zero

1.1 General presentation

...

1.2 Areas of expertise

...

1.3 Team and supervision

...

2 Project context: CLM in the DACH Mittelstand

...

2.1 The Mittelstand segment

...

2.2 Market and compliance pressure

...

2.3 Competitive landscape

...

3 Problem statement

...

4 Functional requirements

4.1 Contract registry

...

4.2 Document linking

...

4.3 Deadline and renewal management

...

4.4 Approval workflows

...

4.5 Compliance and audit trail

...

4.6 Dashboard and reporting

...

4.7 Identity and access management

...

5 Non-functional requirements

5.1 Security

...

5.2 Compliance and data residency

...

5.3 Availability and reliability

...

5.4 Performance

...

5.5 Auditability

...

5.6 Internationalisation

...

5.7 Maintainability

...

6 Actors and high-level use cases

6.1 Actor catalogue

...

6.2 Use-case diagram

Figure I.1 – High-level use-case diagram for CLMPilot.

7 Methodology

7.1 Release-train delivery

...

7.2 Planning cadence and traceability

...

Release-based delivery

Chapter III

Phase 0: Engineering Foundations

Summary

1	Backend service composition	13
1.1	Module composition	13
1.2	Bootstrap and dispatch lifecycle	13
2	Command-Query Responsibility Segregation in practice	14
2.1	Command path	14
2.2	Query path and read-model projections	14
2.3	Authorisation asymmetry	14
3	Aggregate design and bounded contexts	14
3.1	Aggregate map	14
3.2	Modelling decisions worth highlighting	14
4	Reactive patterns: events driving side effects	14
5	External integration patterns	14
5.1	Adapter contract	14
5.2	Authentication and authorisation against integration providers	15
5.3	Failure-mode handling	15
6	Authentication, authorisation and identity	15

Introduction

1 Repository and branch protection model

1.1 Repository decomposition

...

1.2 Branch model and PR workflow

...

2 Continuous integration strategy

...

3 Roadmap as a single source of truth

3.1 Roadmap structure

...

3.2 Auto-synchronisation and stakeholder visibility

...

4 Development environment philosophy

...

Conclusion

...

Chapter IV

Phase 1A: Backend Delivery

Summary

1	Single-page application architecture	16
2	Modular composition: composables and components	16
3	API integration and state management	16
4	Authentication user journey	17
5	Internationalisation in practice	17
6	Feature realisation walk-through	17
6.1	Scenario summary	17
6.2	Walk-through with screenshots	17

Introduction

1 Backend service composition

1.1 Module composition

...

1.2 Bootstrap and dispatch lifecycle

...

2 Command-Query Responsibility Segregation in practice

2.1 Command path

...

2.2 Query path and read-model projections

...

2.3 Authorisation asymmetry

...

3 Aggregate design and bounded contexts

3.1 Aggregate map

Figure IV.1 – Aggregate boundaries and inter-aggregate references.

3.2 Modelling decisions worth highlighting

...

4 Reactive patterns: events driving side effects

...

5 External integration patterns

5.1 Adapter contract

...

5.2 Authentication and authorisation against integration providers

...

5.3 Failure-mode handling

...

6 Authentication, authorisation and identity

...

Conclusion

...

Chapter V

Phase 1B: Frontend Delivery

Summary

1	Production topology	18
2	Infrastructure choices and trade-offs	18
3	Edge and transport security	18
4	Observability and operational posture	18
5	Release process and MVP validation	18

Introduction

1 Single-page application architecture

...

2 Modular composition: composables and components

...

3 API integration and state management

...

Figure V.1 – Authentication user journey covering login, registration confirm with pre-issued login MFA token, and password reset.

4 Authentication user journey

5 Internationalisation in practice

...

6 Feature realisation walk-through

6.1 Scenario summary

...

6.2 Walk-through with screenshots

...

Conclusion

...

Chapter VI

Phase 1C: Production Deployment

Introduction

1 Production topology

Figure VI.1 – Production deployment topology.

2 Infrastructure choices and trade-offs

...

3 Edge and transport security

...

4 Observability and operational posture

...

5 Release process and MVP validation

...

Conclusion

...

Conclusion and Perspectives
